

E-NANNY Australia exhibited at Energy Next 2023 at ICC Sydney on 18-19, July

We were thrilled to be one of the Energy Next 2023 exhibitors. Energy Next was an industry event focusing on the latest renewable energy and energy management technologies. Across 2 days, it had provided an extensive exhibition, workshops, and networking opportunities for those working in the renewable energy industry.

It was a hugely successful event! There were three testing units on the show and were well-received by the visitors.

- [ENS-3002DC Lithium/ Lead-acid Battery Charge & Discharge Tester](#)
- ENS-4805Li Lithium Battery Equalizing Maintenance System
- [ENS-4815D Battery Load Bank Tester](#)

The exciting news was that our three testing units were ordered on the show and they will be vital tools for the customer's battery pre-inspection and maintenance tasks.
