

Make Operation, Installation and Interconnection Effortless !

SET-4XD series Brand-new Intelligent Indicator

- 【Smart Touch Control】 4.3 & 7-inch high-definition touch screens, intuitive interaction and smooth operation.
- 【Robust and Durable】 Stainless steel housing, resistant to harsh working conditions.
- 【Flexible Installation】 External bracket & Cabinet installation for seamless adaptation to various scenarios.
- 【Revolutionary Dual Calibration】 Supports both weight calibration and weight-free calibration simultaneously, making the calibration process simpler and more efficient than ever.
- 【Precision Leap】 Exclusive multi-point correction function significantly improves the accuracy.
- 【Seamless Interconnection】 Ethernet port with support for Modbus-TCP and EtherCat protocols.

Intuitive Touch, Efficiency Revolution

High-definition large screen, one-touch access:

Information is presented intuitively with simple and smooth operation.

Quick start, lower threshold:

Logically designed interactive interface allows new employees to master operations rapidly.

Boost efficiency, cut costs:

Greatly reduce commissioning and calibration time, and effectively avoid misoperations.

Robust and Durable, Ready for Severe Environments

Adopting 304 stainless steel housing and precision sealing technology, it features excellent corrosion resistance, rust resistance and dust proof performance, easily coping with harsh working conditions such as humidity and chemicals. It ensures long-term stable operation in food, chemical and other industries, significantly extending service life and reducing downtime risks and maintenance costs.

Two Mounting Modes, No Compromise on Space

External Mounting: Sturdy bracket for on-site vertical installation, enable easy real-time monitoring.

Flush Mounting: Standard size for integration into control cabinets, keeping the control center neat and unified.

Universal Adaptability: Easily handles various complex scenarios from production lines to control rooms.

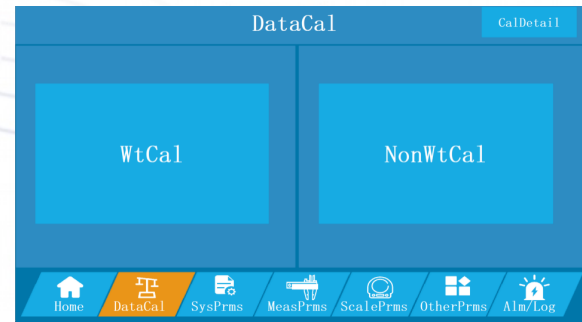

Revolutionary Dual Calibration Plus Intelligent Guidance for Ultimate Efficiency and Convenience

Dual-mode Calibration: Weight calibration complies with specifications; weight-free calibration is flexible and efficient for special scenarios such as high altitude and remote operation.

Intelligent Guidance: Clear graphics and voice/text prompts guide operations step by step, no need to refer to the manual.

Cost Reduction & Efficiency Improvement: Greatly save time and labor costs, lower technical thresholds, and effectively avoid operational errors.

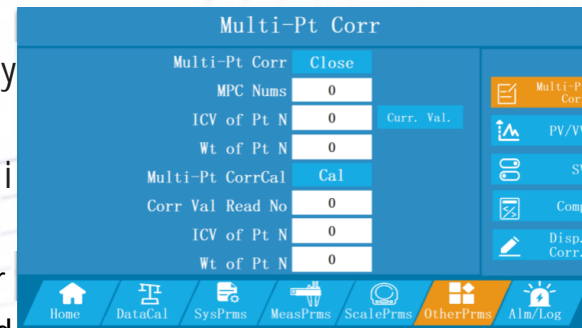

Solve Industry Pain Points, Unlock Full-range Precision of Sensors

Pain Point Resolution: Address the industry challenge of inaccurate micro-weight measurement within a large range.

Core Technology: Full-range multi-point correction to intelligently construct a high-precision compensation curve.

Direct Benefits: Achieve precise measurement and significantly improve micro-weight detectability.

Customer Value: Expand the application scope of equipment, realize multi-purpose of one machine, and save procurement and upgrade costs.

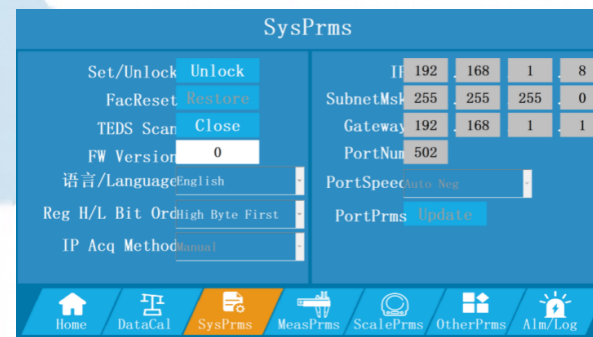

Seamless Interconnection, Power Smart Manufacturing

High-speed & High-efficiency: Ethernet ensures real-time and stable transmission of massive data.

Wide Compatibility: Natively supports Modbus-TCP and EtherCAT for seamless connection with equipment of all brands.

Simplified Integration: Provide sample programs to greatly reduce development difficulty, cycle and additional costs.

Future-Oriented: Lay the foundation for the standard Industry 4.0 architecture and ensure long-term validity of investment.
